Volatility Insights

Watching some historical volatility numbers on shares of Ecopetrol S.A. (EC) we can see that the 30 days volatility is presently 2.35%. The 7 days volatility is 1.73%. Following volatility data can help measure how much the stock price has fluctuated over the specified time period. Although past volatility action may help project future stock volatility, it may also be vastly different when taking into account other factors that may be driving price action during the measured time period.

The company has a beta of 1.63. 1.00 indicates that its price is correlated with the market. Less than 1.00 shows less volatility than the market. Beta greater than 1.00 indicates that the security's price is theoretically more volatile than the market.

The Average True Range (ATR) value reported at 0.51. The average true range (ATR) is a technical analysis indicator that measures volatility by decomposing the entire range of an asset price for that period. A stock experiencing a high level of volatility has a higher ATR, and a low volatility stock has a lower ATR. The ATR may be used by market technicians to enter and exit trades, and it is a useful tool to add to a trading system. It was created to allow traders to more accurately measure the daily volatility of an asset by using simple calculations. The indicator does not indicate the price direction; rather it is used primarily to measure volatility caused by gaps and limit up or down moves. The ATR is fairly simple to calculate and only needs historical price data.

Investors tracking shares of **Ecopetrol S.A. (EC)** may be focusing on where the stock is trading relative to its 52-week high and low. At the time of writing, the stock had recently reached at \$21.86. At this price, shares can be seen trading -21.82% off of the 52-week high mark and 43.34% away from the 52-week low. Investors often pay increased attention to a stock when it is nearing either mark. The Price Range 52 Weeks is one of the tools that investors use to determine the lowest and highest price at which a stock has traded in the previous 52 weeks. It has a market cap of \$44607.08M.

Volume Evaluation

Active moving action has been spotted in Ecopetrol S.A. (EC) on **Wednesday** as stock is moving on change of 1.16% from the open. The US listed company saw a recent price trade of \$21.86 and 647903 shares have traded hands in the session. There are 872.12K shares which are traded as an average over the last three months period.

Trading volume can help an investor identify momentum in a stock and confirm a trend. If trading volume increases, prices generally move in the same direction. That is, if a security is continuing higher in an uptrend, the volume of the security should also increase and vice versa. Trading volume can also signal when an investor should take profits and sell a security due to low activity. If there is no relationship between the trading volume and the price of a security, this signals weakness in the current trend and a possible reversal.

Performance Levels

Looking performance record on shares of Ecopetrol S.A. (EC) we observed that the stock has seen a move 8.16% over the last 52-week trading period. RSI value sited with reading of 57.67. RSI is one of the most popular and widely used technical indicators that provides us with many ways to generate buy and sell signals. The fact that RSI is a bounded oscillator (it takes on values from 0 to 100) allows us to identify overbought and oversold levels quite easily. Wilder considered RSI values over 70 overbought and values below 30 oversold, but these values can be adjusted to suit particular needs and markets. For instance, 80 could be used as overbought line in a strong uptrend and 20 as oversold line in a strong downtrend.
