Trading volume can help an investor identify momentum in a stock and confirm a trend. If trading volume increases, prices generally move in the same direction. That is, if a security is continuing higher in an uptrend, the volume of the security should also increase and vice versa. Trading volume can also signal when an investor should take profits and sell a security due to low activity. If there is no relationship between the trading volume and the price of a security, this signals weakness in the current trend and a possible reversal.

### Volatility Insights

Watching some historical volatility numbers on shares of **Ecopetrol S.A. (EC)** we can see that the 30 days volatility is presently 3.08%. The 7 days volatility is 4.00%. Following volatility data can help measure how much the stock price has fluctuated over the specified time period. Although past volatility action may help project future stock volatility, it may also be vastly different when taking into account other factors that may be driving price action during the measured time period.

The company has a beta of 1.52. 1.00 indicates that its price is correlated with the market. Less than 1.00 shows less volatility than the market. Beta greater than 1.00 indicates that the security's price is theoretically more volatile than the market.

The Average True Range (ATR) value reported at 0.65. The average true range (ATR) is a technical analysis indicator that measures volatility by decomposing the entire range of an asset price for that period. A stock experiencing a high level of volatility has a higher ATR, and a low volatility stock has a lower ATR. The ATR may be used by market technicians to enter and exit trades, and it is a useful tool to add to a trading system. It was created to allow traders to more accurately measure the daily volatility of an asset by using simple calculations. The indicator does not indicate the price direction; rather it is used primarily to measure volatility caused by gaps and limit up or down moves. The ATR is fairly simple to calculate and only needs historical price data.

RSI value sited with reading of 35.61. RSI readings range from zero to 100, with readings above 70 generally interpreted as indicating overbought conditions and readings below 30 indicating oversold conditions. Since the RSI measures the magnitude of recent price movements, it is most prone to generating false signals following sudden, sizable price changes. Generally, as the price of stock rises, the RSI will rise as well, because average gains will outstrip average losses. When the stock price falls, losses typically outstrip gains, causing the indicator to fall.
