Ecopetrol S.A. (EC):

Ecopetrol S.A. (EC) stock moved up 9.27% in contrast to its 20 day moving average displaying short-term an upward movement of stock. It shifted 16.16% above its 50-day simple moving average. This is showing medium-term optimistic trend based on SMA 50. The stock price went overhead 6.06% from its 200-day simple moving average identifying long-term positive trend.

Moving averages provide multiple ways for traders and investors to trade and analyze the market. There isn't a single moving average or combination of moving averages that is ideal; rather, each individual will need to find moving averages that suit their trade timeframe or investment horizon. Traders shouldn't rely solely on moving averages, but should use these tools in conjunction with price analysis and other technical analysis methods.

Company has kept return on Investment (ROI) at 10.80% over the previous 12 months and has been able to maintain return on asset (ROA) at 9.50% for the last twelve months. Return on equity (ROE) recorded at 23.30%.

Ecopetrol S.A. (EC) stock recent traded volume stands with 981413 shares as compared with its average volume of 880.51K shares. The relative volume observed at 1.1.

Volume can help determine the health of an existing trend. A healthy up-trend should have higher volume on the upward legs of the trend, and lower volume on the downward (corrective) legs. A healthy downtrend usually has higher volume on the downward legs of the trend and lower volume on the upward (corrective) legs.

The current ratio of 1.3 is mainly used to give an idea of a company's ability to pay back its liabilities (debt and accounts payable) with its assets (cash, marketable securities, inventory, accounts receivable). As such, current ratio can be used to make a rough estimate of a company's financial health. The quick ratio of 1.1 is a measure of how well a company can meet its short-term financial liabilities with quick assets (cash and cash equivalents, short-term marketable securities, and accounts receivable). The higher the ratio, the more financially secure a company is in the short term. A common rule of thumb is that companies with a quick ratio of greater than 1.0 are sufficiently able to meet their short-term liabilities.

The long term debt/equity shows a value of 0.6 with a total debt/equity of 0.75. It gives the investors the idea on the company's financial leverage, measured by apportioning total liabilities by its stockholders equity. It also illustrates how much debt the corporation is using to finance its assets in relation to the value represented in shareholders' equity.
