ECOPETROL Group recognised ROSEN as an Iconic Supplier with Inclusive and Sustainable Energy by awarding the company the second place in the Innovation and Technology category. **ECOPETROL**, the main and largest oil company in Colombia, awards this recognition to highlight the suppliers that leverage the sustainable development of nations with the design of innovative products or services and outstanding practices in environmental protection.

“Thank you very much for this important recognition in innovation. At ROSEN, we insist on providing the best of technologies and services based on ethical behaviour, protection of people and the environment. This recognition is a demonstration of our value proposition: helping operators ensure safe and efficient piping systems, maximising product uptime and performance, and protecting the environment,” said Leonardo Mendoza, Business Execution Director for Northern South America.

The ROSEN Group is a global provider of state-of-the-art integrity management solutions. Innovation, know-how and a strict focus on customer needs are the key factors in ROSEN's unique success story.

ROSEN stands for innovative and reliable technologies

ROSEN has developed a tailored solution including high-resolution MFL-A ULTRA (magnetic flux leakage with ULTRA-high resolution) technology in a bidirectional configuration – a solution never applied in this form before. The service was done at the 42nd loading line at the Coveñas terminal for a subsidiary of **ECOPETROL** GROUP. The pipeline presented a number of challenges, preventing an inspection using traditional methods.

Due to its complexity, ROSEN's Challenging Pipeline Diagnostics Division took the lead on this inspection. Udo Rühle, the leading Project Manager, explained, “The contract was signed based on an idea because, as with most unpiggable pipelines, there were no ready-to-go solutions available. Therefore, getting the tool designed, manufactured, assembled, tested and signed

available. Moreover, getting the tool designed, manufactured, assembled, tested and signed off was a big challenge. The team worked great together to pull it off and get the solution delivered in time."

The unique solution successfully inspected this so-called 'unpiggable' pipeline, providing the operator with valuable data on the integrity of the asset to help enable its safe future operation.

Said ROSEN Sales Manager Luis Miguel Fernandez, "We are very honoured that one of our most important clients, **ECOPETROL**, has chosen us for this recognition. Our business is innovation, and that is why we are very pleased and happy to receive it."
