Ecopetrol achieved the certification of the water footprint in five new production fields, after the verification process carried out by the Colombian Institute of Technical Standards and Certification (ICONTEC).

With this recognition, the Company strengthens its responsible management of water resources in its operations and reaffirms its commitment to sustainability and water security in the areas where it operates.

The certified assets correspond to the Tibu, Oripaya and Sardinata fields, in the department of Norte de Santander, and Aplay and Suria, in Meta. The verification was based on the water footprint reports corresponding to the period 2018 - 2024. With this, **Ecopetrol** completes 23 certified assets, which include 21 production fields and the Barrancabermeja and Cartagena refineries.

The water footprint measures the volume of water used directly and indirectly in production processes, as well as the possible impacts associated with this resource. This information makes it possible to identify opportunities to optimize the consumption of the resource, improve its management and reduce pressures on water sources.

The certification was granted by ICONTEC under the guidelines of the international standard NTC-ISO 14046:2017, which establishes the principles and requirements for evaluating the calculation of the water footprint in products and processes

recycling in products and processes.

'At **Ecopetrol** we continue to move forward with concrete facts in our commitment to sustainability. The certification of the water footprint in five new production fields, granted by ICONTEC, reflects the technical rigor with which we manage this resource and strengthens our leadership in water management in the country,' said Ricardo Roa Barragan, president of **Ecopetrol**.

This achievement is in addition to **Ecopetrol's** commitment to move towards its ambition of water neutrality by 2045, in line with the Generating Value with Sustainable Sustainability pillar, which is part of the corporate strategy.

To this end, the company promotes actions aimed at improving efficiency in the use of water in its operations, managing the risks associated with pressure on water resources, promoting nature-based solutions and contributing to improving access to drinking water and basic sanitation in communities.

With these advances, **Ecopetrol** continues to consolidate its corporate management of water resources, aligned with international standards and focused on the responsible use of water and the sustainable development of the regions where it has a presence.
